PostalOne!®

Patch Release Notes 41.0.5.0

The *PostalOne!* system Patch Release 41.0.5.0 is scheduled to be deployed June 4, 2015 to introduce software fixes to the system. This includes corrections to issues previously identified in a prior release.

These Release Notes provide the contents of the release and affected subsystems.

Contents of this document are subject to change.

1. External Trouble Reports (ETRs) and Engineering Change Requests (ECRs)

1.1 Electronic Data Exchange

- Mail.XML validation for has been updated to prevent single piece mailpieces (rate category "S") from being marked for Full-Service processing. Prior to this release, Mail.XML processing erroneously marked single piece records as Full-Service. As a result, the affected pieces were incorrectly processed for Seamless Acceptance and Service Performance (SASP) Move Update Compliance validations when they should not have been. 6188 {B}

- Mail.dat postage statement processing has been updated to correctly calculate spoilage for Full-Service Standard Mail pieces. Previously, a defect introduced in the May 17, 2015 PostalOne! system release incorrectly calculated spoilage for Full-Service Standard Mail pieces on postage statements submitted by Mail.dat. 7337 {B}

- Mail.XML processing has been updated to improve performance for the scenario where multiple Original Container Information (OCI) linkage requests are submitted. 7372 {B}

1.2 Electronic Verification System (eVS®)

- eVS manifest processing has been updated to properly assess postage for Point-of-Service (POS) samples. Prior to this release, samples that had been previously manifested as Dimensional Weight pieces and were recalculated by the eVS manifest at a single piece rate were incorrectly priced as if they were Dimensional Weight pieces. 7180 {B}

- eVS has been updated to enable calculation of a postage adjustment for Standard Mail pieces over 0.2063 lbs. that fail destination entry validation. Previously, a defect prevented eVS from calculating the postage adjustment for the affected pieces. The manifest rate was correct; however, a postage adjustment should have been assessed for the difference between the manifested rate and the rate for the same piece without destination entry discounts. 7272 {B}

- eVS validation has been updated to correct an issue that previously resulted in some eVS mailers incorrectly receiving a warning message that their fees were due, even though they had already paid their fees. The issue was caused by a defect that linked the fees due message with the wrong mailer under certain circumstances. The issue did not affect postage, and eVS postage statements for the affected users were processed normally. 7326 {B}

1.3 Postal Wizard

- The Repositionable Notes functionality in Postal Wizard has been updated to enable the line to correctly appear on the finalized postage statement. Previously, when a repositionable note was requested on the Account Verification information page, the line (M1) appeared during postage statement entry, but was not present on the finalized statement. This was a display issue only and did not affect postage. 7245 {B}

- Postal Wizard has been updated to disallow the selection of the DDU Destination Entry Discount option when entering a Standard Mail postage statement with a processing category of "LT" (Letters). Prior to this release, the DDU Destination Entry Discount option was available for selection when entering Standard Mail letters. If a user selected the DDU Destination Entry Discount option with Standard Mail letters, the invalid combination resulted in a line item entry page with zero available lines, which generated a timestamp error. 7345 {B}
